

**PROFESSIONAL STANDARDS AND DIVERSITY COMMITTEE – 17 JULY 2008**

**MONITORING OF STOP AND ACCOUNT AND STOPS AND SEARCHES**

**REPORT BY THE CHIEF CONSTABLE**

**PURPOSE OF REPORT**

*The purpose of this report is to provide members with statistics for the period 1 April 2008 to 31 May 2008 for the purposes of monitoring 'stop and account' and 'stops and searches' during that period.*

**1. BACKGROUND**

- 1.1 Statistics for stop and account and stops and searches appear as a Standing Agenda item at each meeting of this Committee. These statistics, which are supplied to members on a quarterly basis in the format agreed, are designed to enable members to monitor, assess and keep the Force's use of 'stop and account' and 'stop and search' powers under review.
- 1.2 At the meeting of the Committee on 15 May 2008, members were presented with the fourth stop and search statistics for the period 1 April 2007 to 31 March 2008.

**2. STOP AND SEARCH STATISTICS FOR THE PERIOD 1 APRIL 2008 TO 31 MAY 2008**

- 2.1 The statistics for the period 1 April 2008 to 31 May 2008 are attached to this report at Appendix A. Overall conclusions appear on page 21 of the report.

**3. RECOMMENDATION**

- 3.1 Members are asked to note the contents of this report.

# 1. TERMS OF REFERENCE

This report has been prepared to advise both Dorset Police and Dorset Police Authority on the use of the powers under PACE Code A. The report covers the period 1<sup>st</sup> April 2008 to 31<sup>st</sup> May 2008.

## 2. INTRODUCTION

The recommendations from the Stephen Lawrence Inquiry have directly influenced the use of Stop/Search powers and introduced the recording of Stop/Account.

Recommendation 61 states; 'That the Home Secretary, in consultation with Police Services, should ensure that a record is made by police officers of all "stops" and "stops and searches" made under any legislative provision (not just the Police and Criminal Evidence Act). Non-statutory or so called "voluntary" stops must also be recorded. The record to include the reason for the stop, the outcome, and the self-defined ethnic identity of the person stopped. A copy of the record shall be given to the person stopped'.

Recommendation 62 requires that records of Stops and Stops and Searches should be 'monitored and analysed by Police Authorities .... and the information and analysis published'.

Recommendation 63 requires that 'Police Authorities should ..... undertake publicity campaigns to ensure that the public is aware of the Stop and Search provisions and the right to receive a record in all circumstances'.

The Home Office Stop and Search Manual sets out the role and responsibilities of the Force and the Police Authority in relation to stop and search and stop and account.

The Practice Advice on Stop and Search, 2006 produced by Centrex, on behalf of ACPO, provides guidance and practice advice in respect of Stop/Search for Forces and Police Authorities, which, with the support and confidence of communities is a valuable tool in tackling criminality and terrorism.

The Stop and Search Manual and Practice Advice on Stop and Search can be obtained from the Chief Executive's Office.

Dorset Police has published the 'Police Stops and Stop/Search: Supervision and Monitoring Policy', which outlines the monitoring, evaluation and review procedures. Monthly evaluations of the operational effectiveness of the Stop and Stop/Search tactic are conducted at Divisional level. Quarterly reviews are conducted by the Community Engagement Department and circulated to the Governance Managers in each territorial division so that their comments can be incorporated in the final report.

It is vital that the force demonstrates that Stop/Account and Stop/Search powers are used effectively and fairly, in order to increase the public's confidence in, and support for, the policing they receive.

Dorset Police aims to:

- Ensure that Stop and Stop/Search powers are exercised in a professional and ethical manner.
- Record all Stops and Stop/Searches conducted, allowing for the permitted exceptions, i.e. that it is impractical to do so due to public disorder, or that the officer is urgently required elsewhere.
- Improve the effective use of Stop and Stop/Search in tackling crime.
- Ensure Stop and Stop/Search is used and applied with equality across our diverse communities.
- Ensure Stop and Stop/Search is used in a way that enhances public trust and confidence.

The quarterly review procedures form part of the force's Race Equality Scheme 3 Year Action Plan and are presented to the Strategic Diversity Board for information and comment.

### **3. METHODOLOGY**

As a result of the additional recording requirements made in Recommendation 61, Dorset Police has introduced an updated record form (C314), which is used for both Stop/Account and Stop/Search activity. The Home Office Section 95 return requires data submission using Phoenix Codes; White European, Dark European, African Caribbean, Asian, Oriental, Arab and Other.

As detailed previously, the force currently records both self-defined ethnicity and Officer Perception using the 16+1 ethnicity codes as used in the Census data; thereby providing more detailed data than required for statistical returns to meet submission criteria, 16+1 Officer Perception information is aggregated to comply with Phoenix classifications

Force policy requires all forms to be submitted to the searching officer's supervisor within 24 hours of the activity taking place.

Supervisors are required to check all Stop/Account and Stop/Search forms to ensure the legality of the search, the accuracy of the record, including the ethnicity and descriptive monitoring sections, and that Code A of that Code of Practice has been complied with. The relevant data is then input onto a Stop and Search database.

Divisional Commanders have nominated senior Managers as the Divisional Stop and Search Audit Officers, who are responsible for continuously monitoring the broader use of Stop/Account and Stop/Search at Divisional and Section level. Any apparent disproportionate use of the power by particular officers or groups of officers, or in relation to specific sections of the community should be identified and investigated by the Audit Officer. Positive action must be taken where instances of possible discrimination are identified and a record kept of the action taken.

It is not currently possible using the electronic database to ascertain any trend data for areas of non-compliance as the system does not provide searchable fields to assist with this task. At this point in time it is not possible to readily identify, at a strategic level, areas of non-compliance i.e. non completion data fields on the form or inappropriate use of powers. The need to consider how this facility can be provided forms part of the Street Interventions Project.

The Community Engagement Department has worked with the Corporate Development Department to analyse the current Stop/Account and Stop/Search database to produce this report.

Information has been provided on the activity undertaken during all three quarters.

## 4. STOP AND ACCOUNT

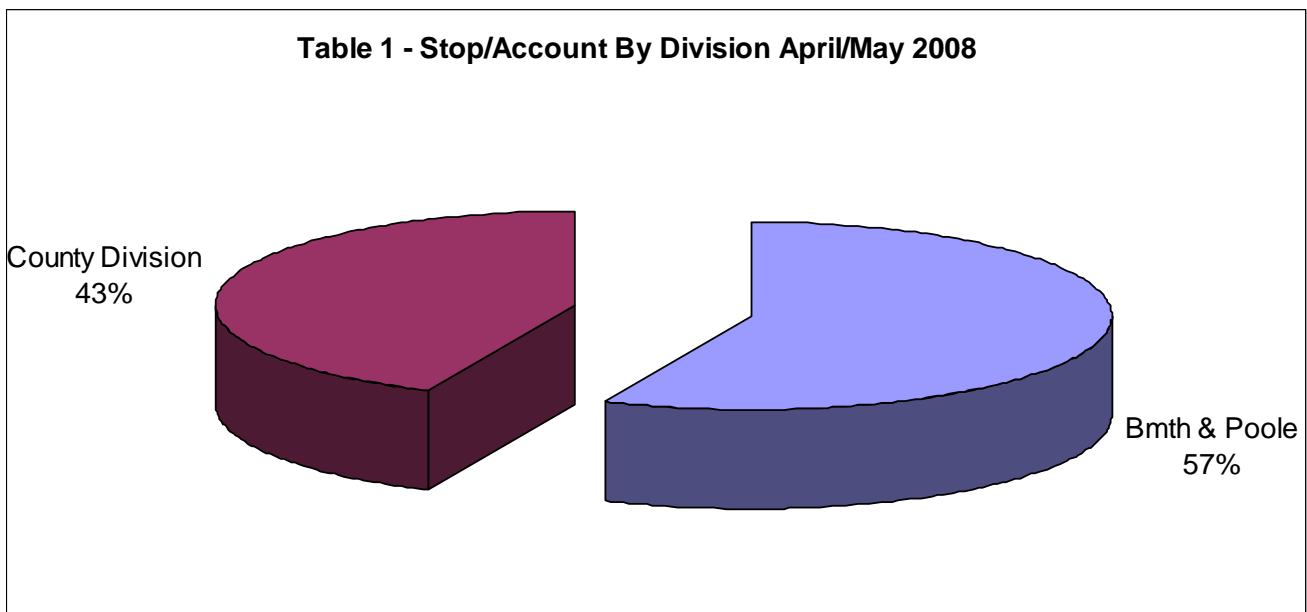

The Stephen Lawrence enquiry defined a 'stop' as follows:

*"When a police officer requests a person in a public place to account for themselves, i.e. their actions, behaviour, presence in an area or possession of anything, a record of the encounter must be completed at the time and a copy given to the person who has been questioned."*

### 4.1 Quarterly Profile

During the period 1<sup>st</sup> April 2008 to 31<sup>st</sup> May 2008 a total of 534 Stop/Accounts were recorded across the Force area. A comparison graph has not been included due to the report not being for a full quarter. However, it is expected that the first quarter 2007/08 will show a slight increase in recording in comparison with the first quarter 2006/07.

Table 1 shows the total number of Stop/Account recorded activity for April and May, by division.

The data shows that the majority of recorded Stop/Account activity occurs within the Bournemouth and Poole Division. This is reflected when comparing the level of Stop/Account activity with the level of Stop/Search activity recorded (68% of overall force activity) for the same period; see section 5.1.

The Bournemouth and Poole Division continues to operate Operation Venus (a proactive response to Anti Social Behaviour with an inbuilt Juvenile Referral Scheme) and this combined with a burglary series is thought to explain the increased use of stop and account. In addition the intelligence updates are undertaken by IMU staff, which has removed the

need for an officer to undertake this function. However, the difficulties of data retrieval from the Dorset Police Management Information System (DORMIS) means it is difficult to identify specific reasons for the fluctuation in activity.

The Divisional Operations Unit (DOU) checks stop and search and stop and account forms each morning to ensure that all intelligence opportunities have been taken and where required will action the originating officer to submit suitable logs. Initially it was expected that the DOU staff could do this however intelligence-handling rules require it to be the originating officer. The completed forms are then discussed at the morning intelligence meetings.

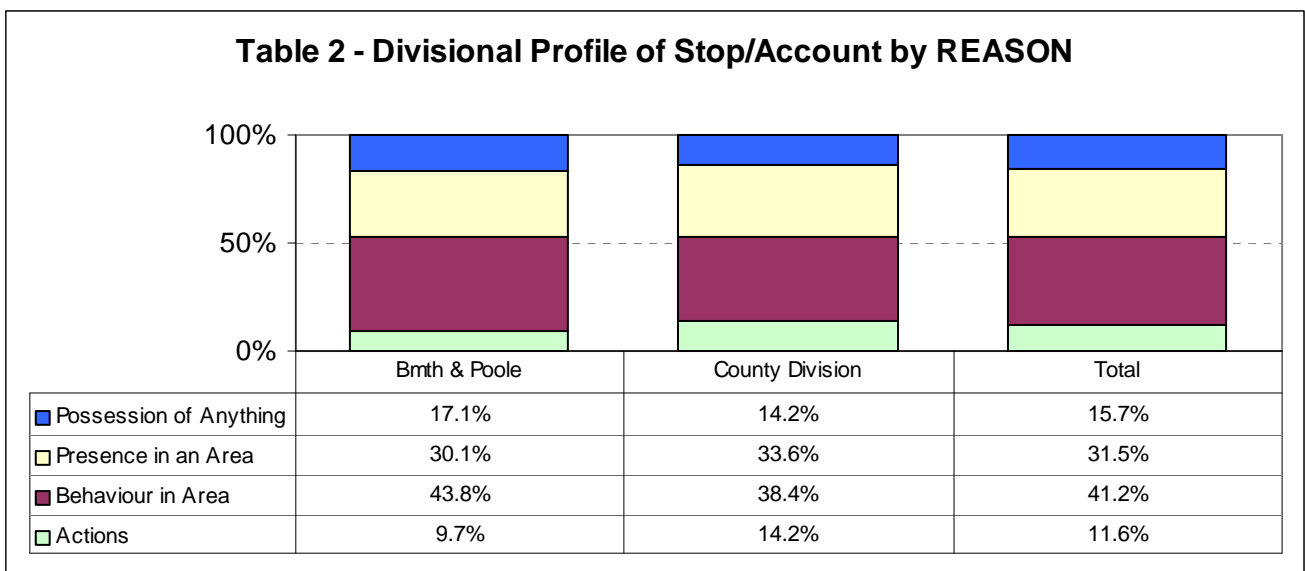

The fourth quarter report highlighted that the number of recorded Stop/Accounts represented 35% of overall force combined stop account and stop search activity. When reviewing the total activity recorded during for April and May, data indicates that this remains fairly consistent at 34%.

#### 4.2 Reason Codes

The reasons for an individual being asked to Stop and Account for themselves are recorded as:

- Actions
- Behaviour
- Presence in area
- Possession of anything.

It is of note that the first two months reported data indicates that 'Behaviour in Area' is the most frequent reason recorded, representing 41.2% (220), of overall force activity, in comparison to the last four quarters reports where 'Presence in Area' was consistently recorded. As can be seen below in Table 2, Bournemouth and Poole Division has recorded the highest use of this reason code for the reporting period 1<sup>st</sup> April to 31<sup>st</sup> May 2008.

It has been highlighted that there is some confusion regarding the reason codes 'Presence in Area' and 'Behaviour in Area', for example when dealing with Anti Social Behaviour, as when completing the form this could be due to 'Presence in Area' or 'Behaviour in Area'. Training is currently being provided for all operational staff at the

divisional training days. A communications plan has been developed to raise awareness of the correct completion of forms.

### 4.3 Data Quality

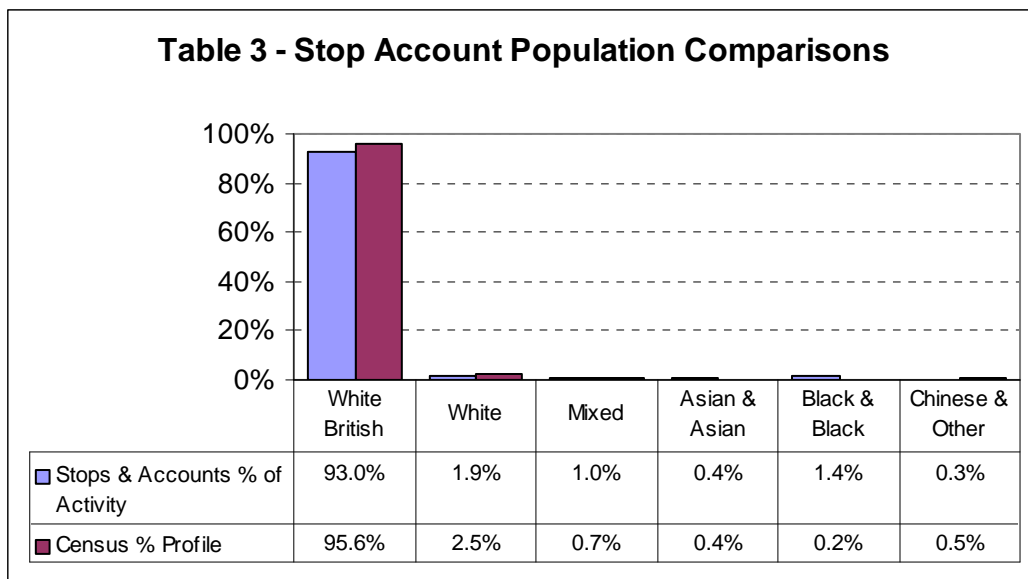

There is minimal missing data for this reporting period. The total omissions in relation to; reason code, self defined ethnicity, officer perception, gender and age break down as follows:

- Bournemouth & Poole – 7
- Dorset County – 2

### 4.4 Comparison with Community Population Percentages

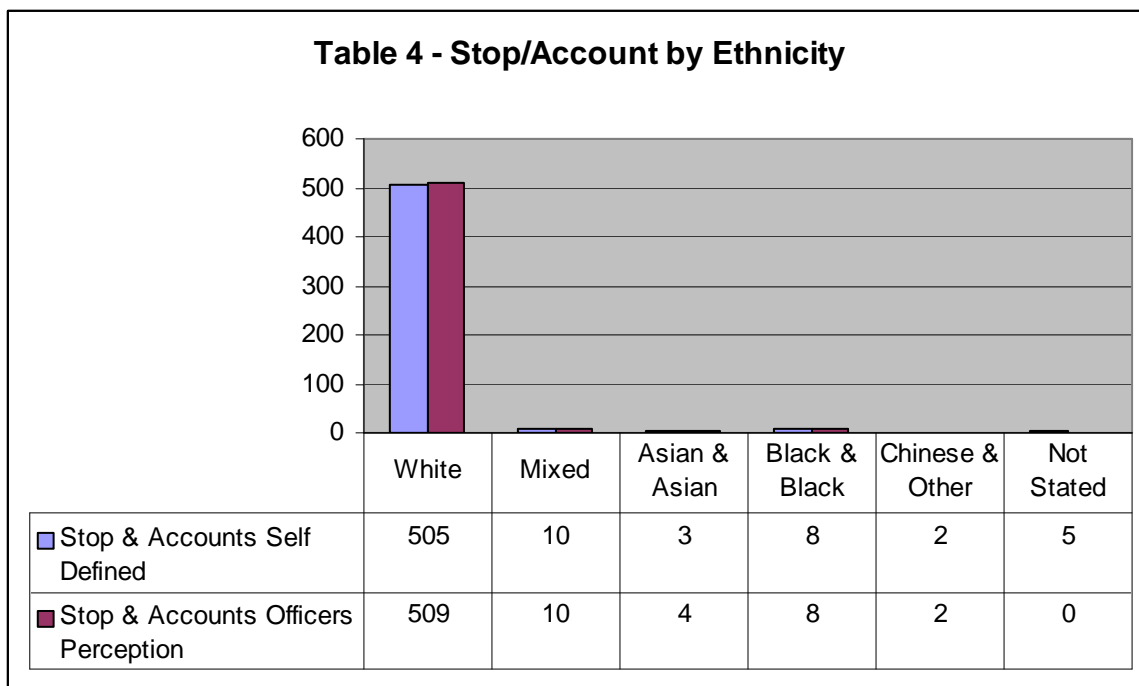

The Stop and Search Manual produced by the Home office requires forces to measure disproportionality by taking the Stop/Search figures at force level, which are then broken down into ethnicity and compared against the respective resident population as per Census figures.

The force has also compared Stop/Account activity against the resident population as per Census figures. Table 3 below details that when looking at overall force activity, in comparison to self-defined ethnicity, it can be seen that activity in relation to Black and Black British people is 1.4%, when compared with a census population of 0.2%. It is believed that the census data may not necessarily reflect the current street population and this will be further explored within the street interventions project.

### 4.5 Self Defined Ethnicity and Officer Perception

Both Officer Perception and self-defined ethnicity data shows an aggregated total of 534 records. Of those records, 94.6% of people Self Defined White British and 1.5% of people self-defined as Black and Black British. It is of note that 1.9% of people Self Defined as Mixed.

When comparing this information to the Officers Perception, it can be seen in Table 4, that officers perceived that 95.3% of people were White British and 1.5% of people were Black and Black British, therefore representing minimal difference.

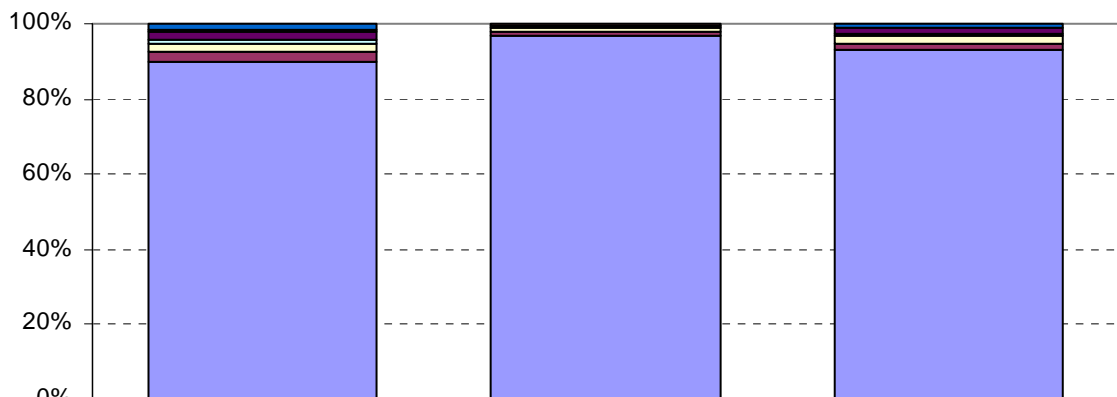

It should be noted that the conversion of data from 16+1 to 6+1 categorisation, described in section 3, has highlighted the potential for the integrity of our data to be compromised. This will be explored further within the Street Interventions project.

Unfortunately, we are unable to use the current system to identify why there is any discrepancy between individual's self-defined ethnicity and officers' perception, without doing a manual search of stop account records. This course of action is not considered an effective use of resources given the current level of discrepancy.

Table 5 illustrates the Divisional profile of Stop/Account by self-defined ethnicity. It can be seen that 92.7% of overall activity, during the reporting period, related to those who self-defined as 'White'. In comparison, those who Self Defined as 'Black or Black British' continue to represent 1.5% of overall activity, and those 'Not Stated' represented a further 0.9% of overall activity. This is similarly reflected in the activity recorded for Stop/Search in Section 5.4.

Bournemouth and Poole Division will be Quality Assuring their forms as from 1<sup>st</sup> May in order to identify any areas of apparent disproportionality and recording errors. Areas for improvement will be addressed through training and feedback with individual officers. Key areas of concern have been fed back into the training being provided, and is subject to review by the Governance Manager.

**Table 5 - Divisional Profile of Stop & Account by Ethnic Groups  
(Apr to Mar 2008)**

	Bmth & Poole	County	FORCE
Not Stated	1.7%	0.0%	0.9%
Chinese & Other	0.3%	0.4%	0.4%
Black & Black British	2.3%	0.4%	1.5%
Asian & Asian British	1.0%	0.0%	0.6%
Mixed	2.3%	1.3%	1.9%
White	2.6%	0.9%	1.9%
White British	89.4%	97.0%	92.7%

#### 4.6 Gender

During the reporting period, 1<sup>st</sup> April 2008 – 31<sup>st</sup> May 2008, 441 (82.9%) stop/account encounters involved males and 91 (17.1%) females. A further 2 DORMIS records did not include gender data. There are no specific issues to raise in relation to missing data other than those outlined at 4.3.

**Table 6 - Stop/Account by Gender**

The most recent estimate of gender breakdown in the Force area estimates that 52% of the population are female; (Office for National Statistics 2004). Whilst the issue is complex, it is

interesting to note that arrest data for the period 1<sup>st</sup> April 2008 to 31<sup>st</sup> May 2008, shows that the total percentage of females arrested was 16%.

Home Office Research Paper 131 – Profiling Populations Available for Stops and Searches, (2000) highlights that recorded activity nationally predominantly involves males.

#### **4.7 Age**

When looking at the age groups of those persons who were subject to a Stop/Account, all records now provide details.

Examination of Stop/Account activity by age groups, as previously stated in the Fourth Quarter Report 2006/07 continues to illustrate that the majority of the total recorded (64% / 342) activity relates to persons under 25 years of age.

The age breakdown is seen below:

<b>Age Groups</b>	<b>Total Number</b>	<b>Percent</b>
Under 25	342	64%
26 – 40	38	7.1%
41 – 65	138	25.8%
Over 65	9	1.7%
Not recorded	7	1.3%
<b>Grand Total</b>	<b>534</b>	<b>100%</b>

Unfortunately, the Dorset Data Book (2006) does not allow us to reconcile this recorded activity against population, as the age bands do not correlate with our current Stop/Account bandings.

## **5. STOP AND SEARCH**

### **5.1 Profile of Stop and Search Activity**

In the reporting period, a total of 1022 Stop/Search encounters were recorded across the Force area. For the reporting period covered by this report it is not possible to compare figures for the same period in 2007 and as previously reported the current database does not allow the force to identify those individuals who have been subject to repeated Stop/Search, nor does it cross reference to intelligence records or enable the force to identify any sanctioned detections that have resulted from use of this power. This data would need to be acquired manually and would therefore be too resource intensive.

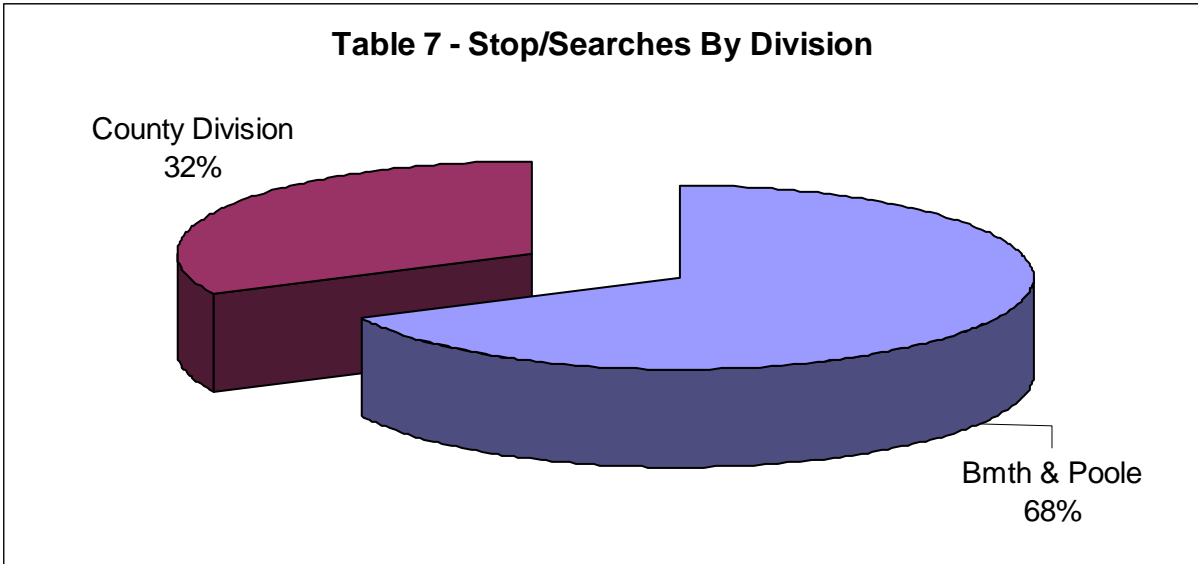

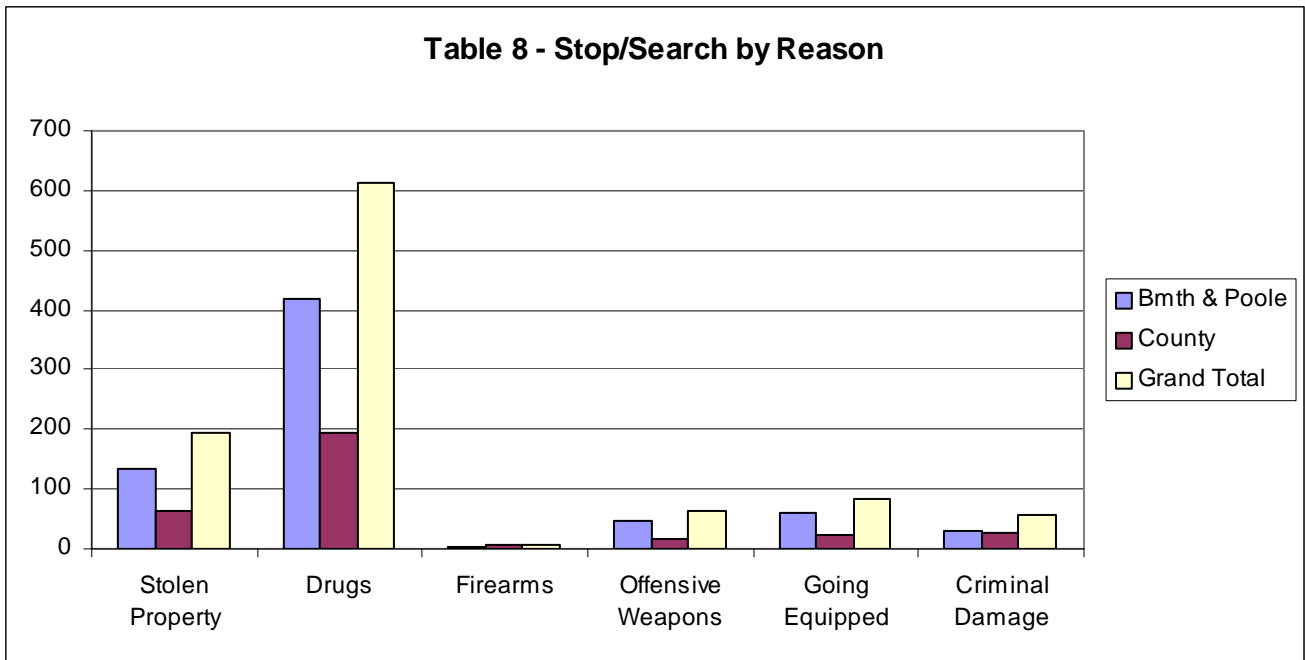

Table 7 shows the total number of Stop/Searches each quarter by Territorial Division. The highest level of recorded activity occurs in the Bournemouth and Poole Division (692 records), and this is consistent when combining divisional data throughout the last 5 quarters.

**5.2 Reason Codes**

The reason codes for an individual being Stop/Searched are:

- Stolen Property, Offensive Weapons, Going Equipped, Articles to cause criminal damage - S1 PACE
- Drugs - S23 Misuse of Drugs Act
- Firearms – S47 Firearms Act
- Terrorism 44 (1) (vehicle/occupants)
- Terrorism 44 (2) (pedestrians)
- Anticipated violence – S60 CJPO
- Other Power

Table 8 below illustrates the Stop/Search profile by reason code.

The most frequent reason code recorded continues to be 'Drugs', representing 60% (613 encounters), of overall force activity.

Bournemouth and Poole currently operate "Operation Dismantle" involving proactive policing focussed on drugs networks and their links to acquisitive crime. This is the focus of front line activity in general and it is acknowledged that this is reflected in recorded Stop/Search activity. The Division recognise the importance of a quality assurance process to ensure that the relationship between intelligence and activity is robust. Due to the postponement of the work of the Street Interventions Project Manager, it has not been possible to progress the research into the relationship between drug related intelligence and stop search activity in the Bournemouth and Poole Division. However, the Bournemouth and Poole Division anticipate that this will be progressed with of the appointment to the dedicated Sergeant role.

Examination of quarterly activity by territorial division indicates that there is no seasonal trend in activity.

### 5.3 Data Quality

There is minimal missing data for this reporting period. The total omissions in relation to; reason code, self defined ethnicity, officer perception, gender and age break down as follows:

- Bournemouth & Poole – 9
- Dorset County – 5

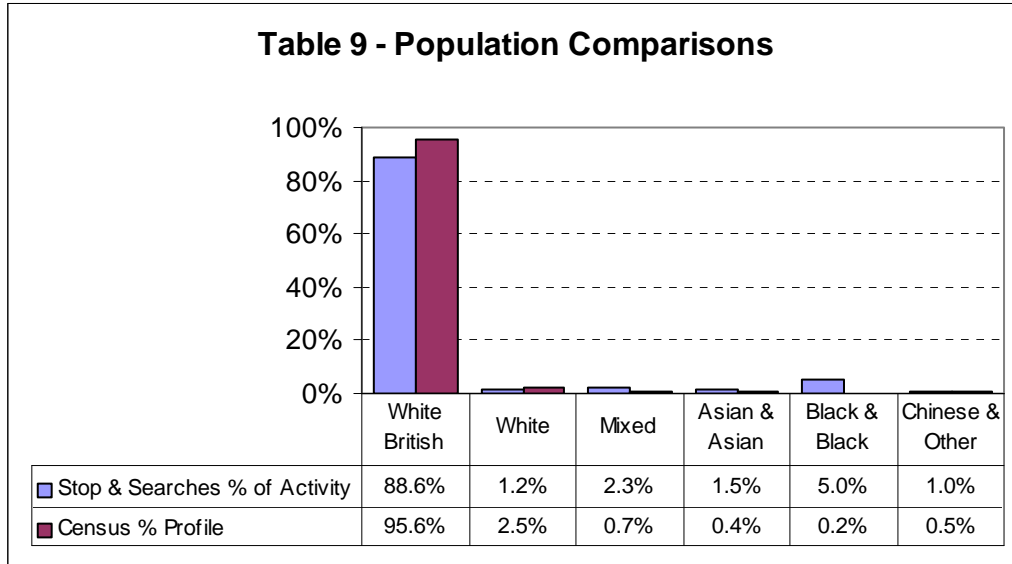

As outlined in Section 4.3, divisions continue to highlight that the limitations of the DORMIS restrict effective quality assurance and scrutiny at a senior command level. To undertake detailed research requires significant resource investment.

### 5.4 Comparison with Community Population Percentages

The Stop and Search Manual produced by the Home office requires forces to measure disproportionality by taking the Stop/Search figures at force level, which are then broken

down into ethnicity and compared against the respective resident population as per Census figures.

In terms of overall recorded force activity, in percentage terms, recorded activity in relation to self-defined Black and Black British individuals, figures remain relatively high at 5%, showing an increase on the last quarter report (4.3%).

Members will be aware that this apparent disproportionality is subject of a dedicated Street Interventions Project being undertaken by the Force and is subject of a separate update to this committee.

### 5.5 Self Defined Ethnicity and Officer Perception

Both Officer Perception and self-defined ethnicity data relate to a total of 1022 records and a breakdown of the aggregated figures is shown in Table 10.

**Table 10 - Stop/Search by Ethnicity**

Stop & Searches Self Defined	917	23	15	51	10	6	0
Stop & Searches Officers Perception	912	26	15	51	17	1	0

Data for this reporting period illustrates that 89.7% (917) of people Stop/Searches Self Defined as White and 5% (51) as Black and Black British.

When comparing this information to the Officers Perception, the data shows that officers perceived 89.2 (912)% of those individuals that they Stop/Searches to be White. Similarly they perceived 5% of individuals to be Black.

For this reporting period there is no discrepancy between Officer Perception and Self Defined Ethnicity as shown above.

Table 11 below, illustrates the Divisional profile of Stop/Search by self-defined ethnicity. It can be seen that 88.6% of overall activity, during the reporting period, related to those who self defined as 'White British'. In comparison, those who self defined as 'Black or Black British' represented 5% of overall activity, and those 'Not Stated' represented a further 0.6% of overall activity. This is similarly reflected in the activity recorded for Stop/Account under Section 4.4.

**Table 11 - Divisional Profile by Ethnic Groups  
(Apr to Mar 2008)**

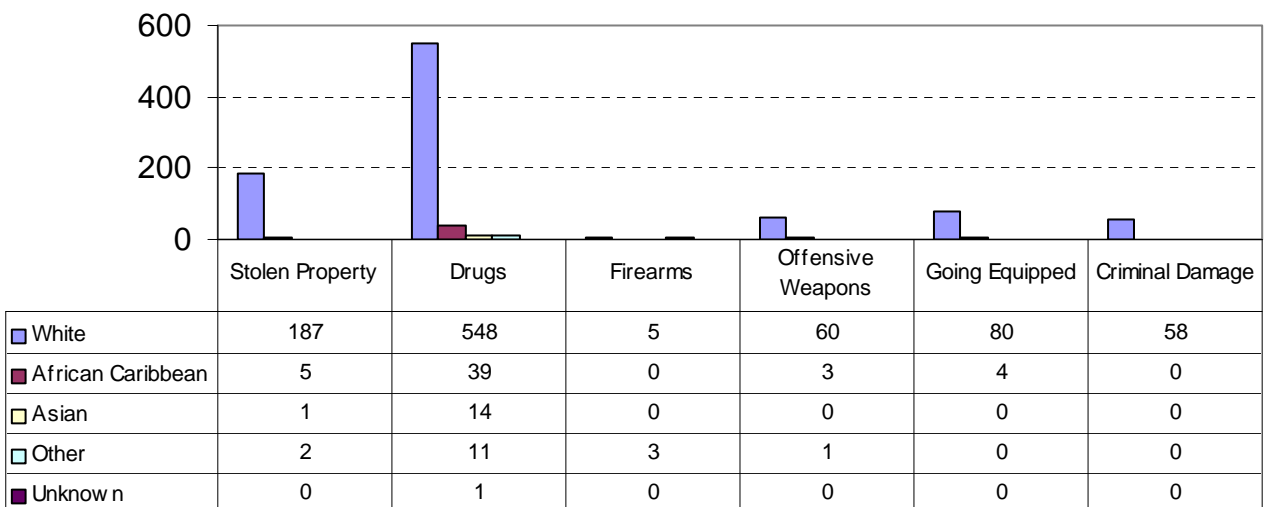

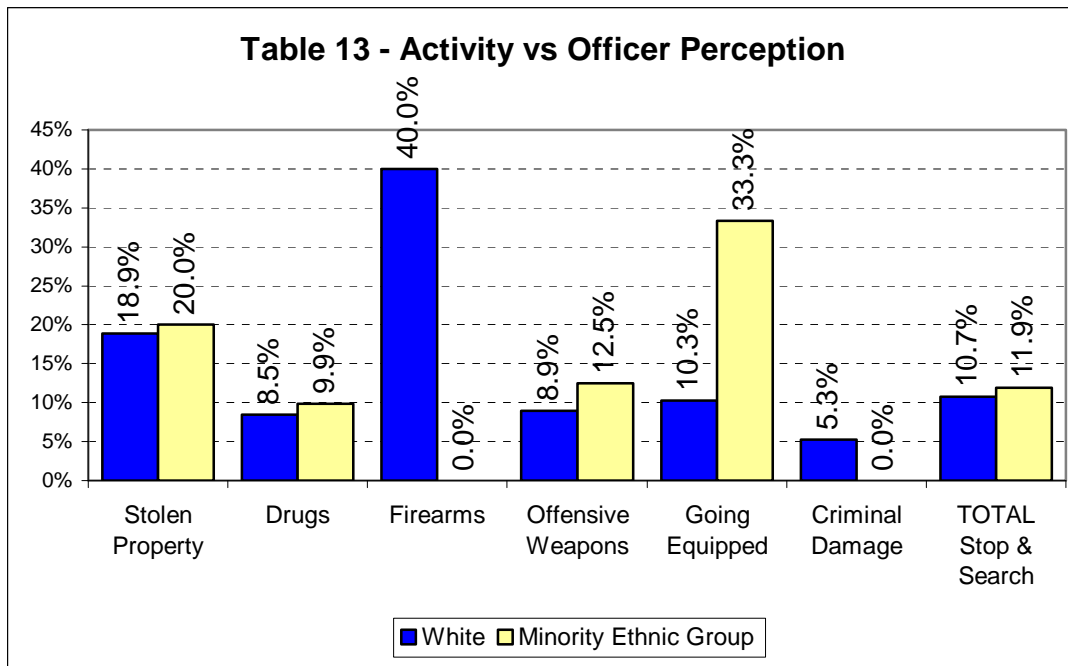

Table 12 below compares self-defined ethnicity and reason for Stop/Search and it can be seen that the highest amount of activity was recorded for people who are White and searched for Drugs. Also of note is the relatively high number of African Caribbean people searched for Drugs when compared to alternative reason codes. This continues to reflect the position stated in the last quarter report. Within Bournemouth and Poole conurbation area, intelligence led operations may have had an impact on this data, but this cannot be stated with any certainty without more detailed analysis.

**Table 12 - Ethnicity vs Reason**

## 5.6 Arrests

Table 13 below provides a limited breakdown of Stop/Search activity resulting in arrest by ethnicity based on officer perception.

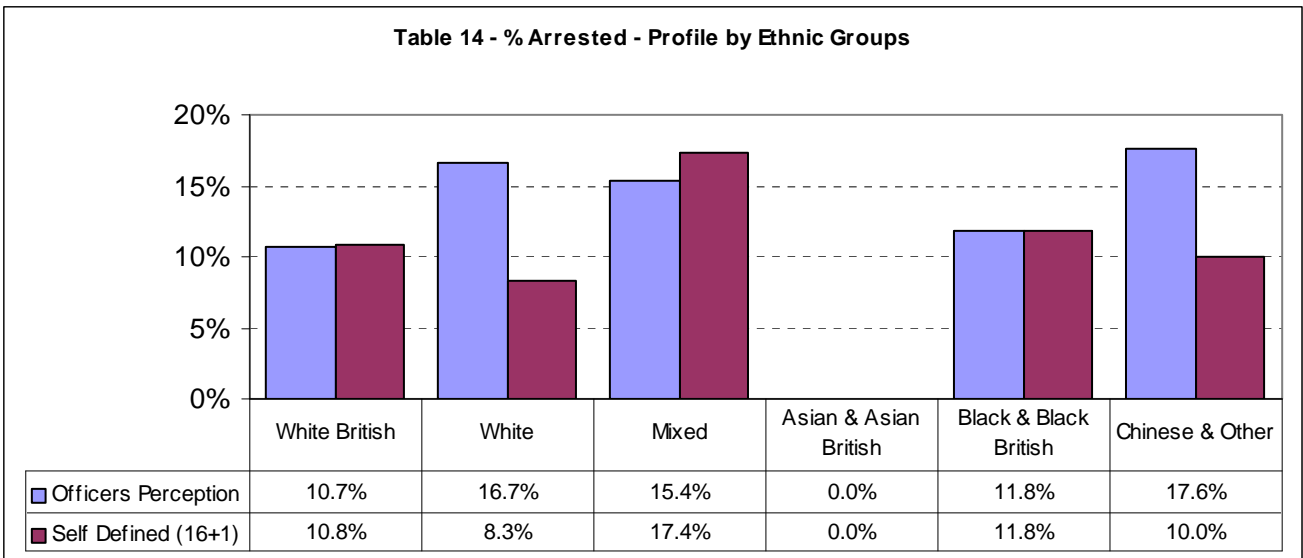

Of the 1022 Stop/Search records, a total of 111 resulted in arrest, representing a conversion rate of 10.9%. However, the current recording system does not allow us to readily identify if there is a correlation between the reason for the arrest and the Stop/Search reason code; i.e. a person may be stop searched because they are suspected of being in possession of stolen property, but in the course of the search the officer may find drugs leading to an arrest. It is difficult to correlate the reason for arrest with the stop search database for reporting purposes, other than manually and the potential to make this more viable will be explored through the street interventions project.

Examination of the data for this reporting period against officer perception, reason code and number of arrests per ethnic group, has shown that the highest percentage arrest rate for White individuals (40% or 2 arrests) is for Firearms, whereas ethnic minority individuals (33.3% or 2 arrests) are related to reason code 'Going Equipped'.

Table 14 illustrates the number of arrests by ethnic group defined by both Officer Perception and Self Defined Ethnicity. The highest percentage of arrests relate to 'White and White British' for Officer Perception, whereas Self Defined relate to 'Mixed'.

**Table 14 - % Arrested - Profile by Ethnic Groups**

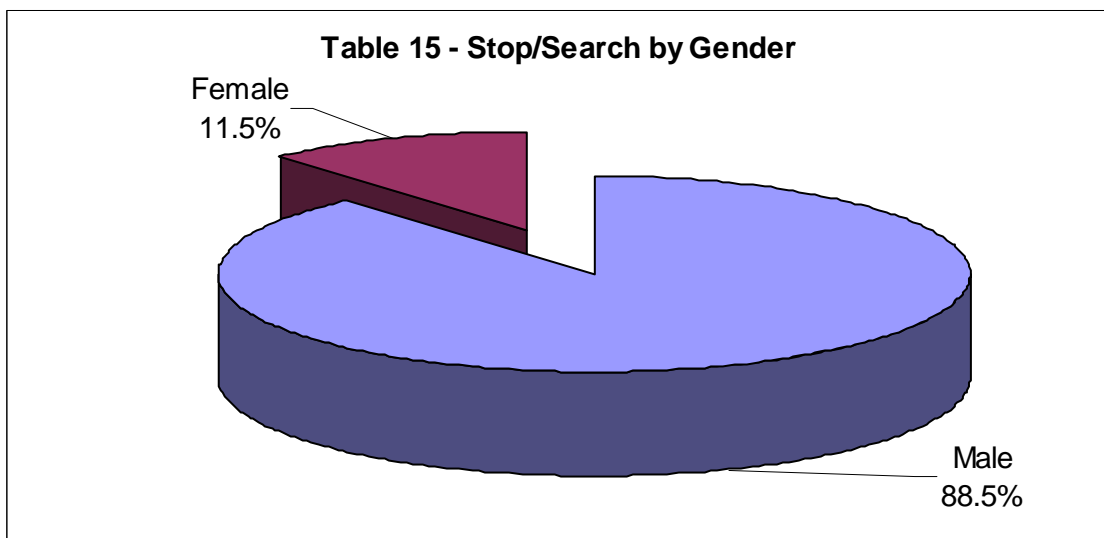

### 5.7 Gender

During the reporting period, 1<sup>st</sup> April 2008 – 31<sup>st</sup> May 2008, 904 stop/search encounters involved males and 117 females. DORMIS was found to have missing data in 1 (0.1%) of records.

The responsibilities of the supervising officer are, as mentioned previously, key to ensuring that missing data is kept to a minimum and the research at Bournemouth suggests that in most cases this is being undertaken. Further research is required to confirm the hypothesis that the majority of missing data is attributable to inputting problems rather than incomplete form submission by staff in other Divisions.

The most recent estimate of gender breakdown in the Force area state that 52% of the population are male; (Office for National Statistics 2004).

Table 15 illustrates the gender breakdown by percentage for the reporting period:

When comparing why individuals were subject to Stop/Search against their gender, the majority of searches for both genders related to the reason code 'Drugs', (540 males and 73 females) and this is consistent with the last three quarterly reports.

## 5.8 Age

Data for the reporting period shows that 49.3% of the total number of recorded stop/search encounters related to persons less than 25 years of age. This is an increase of 3% since the last report.

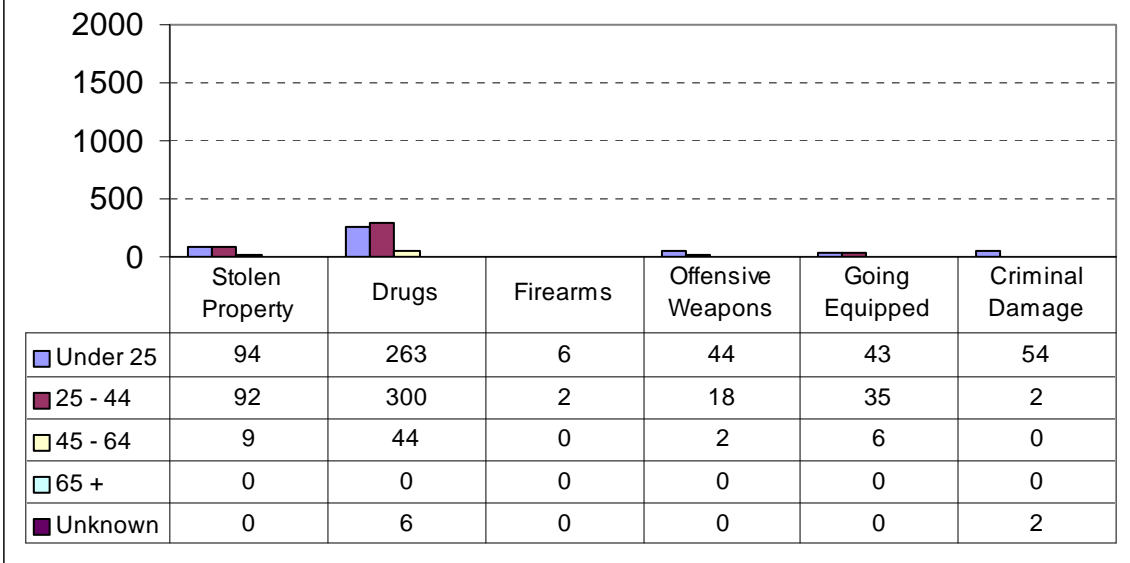

The age breakdown is detailed below:

Age	Annual Totals	Percentage
Under 25	504	49.3%
26 - 40	61	6.0%
41 - 65	449	43.9%
Over 65	0	0.0%
None stated	8	0.8%
<b>Grand Total</b>	<b>1022</b>	<b>100%</b>

The Dorset Data Book 2006 does not allow us to reconcile this recorded activity against population, as the age bands do not correlate with our current Stop/Account bandings. Due to the wide age groupings used in national statistics it is not possible to correlate these figures with local population information.

When comparing why individuals were subject to Stop/Search against their age, it can be seen that overall the highest activity continues to be recorded against those individuals who are aged between 25 and 44 years of age and were Stop/Searched for Drugs.

**Table 17 - Reason vs Age**

When looking at the breakdown into age groups in comparison to gender, initial data shows that men under the age of 25 and women in age groups 'under 25' and '25 to 44' are more likely to be subject to Stop/Search.

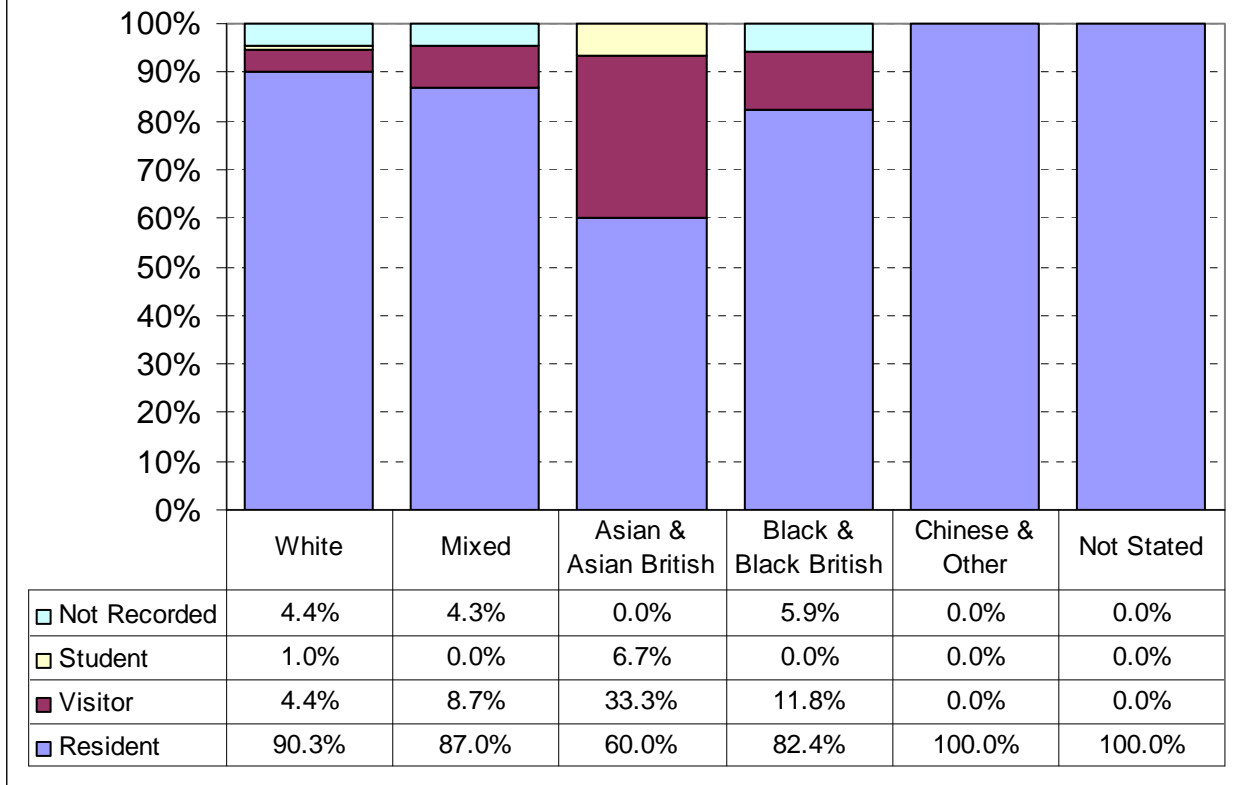

**Table 18 - Age vs Gender**

**5.9 Resident/Student/Visitor**

Table 19 provides a breakdown of Stop/Search activity by resident, student, visitor status and ethnicity.

**Table 19 - Person Status vs Ethnicity**

It is important to recognise that those interactions relating to visitors have an impact on the comparisons made, as visitors are not included in the Census data, and more recent population estimates do not provide ethnicity data.

The highest percentage of stop search activity affecting 'Visitors' at 33.3% (5 reports) relates to those who are Asian and Asian British. In the last quarter 26.1% of force activity was recorded for visitors in the same ethnic category.

When looking at those records relating to individuals who are shown as 'Black and Black British' and 'Visitor', the table below shows that 83.3% (5) of interactions related to 'Drugs'. It is of note that it is not possible to correlate this with the intelligence system at this stage, other than by undertaking a manual search.

	Search Reason	Resident	Visitor	Student	Not Recorded	TOTAL
Black & Black British	Stolen Property	5	0	0	0	5
	Drugs	33	5	0	1	39
	Firearms	0	0	0	0	0
	Offensive Weapons	1	1	0	1	3
	Going Equipped	3	0	0	1	4
	Criminal Damage	0	0	0	0	0
<b>Black &amp; Black British Total</b>		<b>42</b>	<b>6</b>	<b>0</b>	<b>3</b>	<b>51</b>

## **6. INDEPENDENT SCRUTINY**

It was recommended at the IAG Liaison Meeting held on 11 July 2007 that key issues such as Hate Crime and Stop/Search become part of the agenda for all divisional IAG meetings.

The Bournemouth and Poole Independent Advisory Group (IAG), undertakes scrutiny of divisional stop search records on a quarterly basis. Bournemouth and Poole will be piloting a scheme in which Language Line will be contacted if there is a problem with language communication between the officer and the person subject to the interaction, as a result of a request from IAG members. The IAG were working with the Street Interventions Project Manager, however activity has been suspended until the appointment of the new Inspector.

At the last meeting of the Ferndown IAG, the group did sample some recent stop/search and stop/account forms that had been submitted. Of the 12 forms examined, all were white males and all but one were under 25 years of age. One significant fact that the IAG members picked up on was the similarities in the description fields, particularly in relation to clothing.

The question was raised around whether young people wore 'hoodies' not because, for whatever reason, they didn't want to be recognised but to fit in, and therefore not put them at risk from unwarranted attention from other young people. The IAG sought reassurance that young people were not being targeted for stop and stop/search purely on the basis of their dress and Chief Inspector Maton agreed to ensure that at divisional training sessions, officers were reminded that young people might choose to dress in a particular way, not to intimidate others but as a way of self protection.

The Weymouth IAG at their next meeting will be asked to consider the section of the attached document that shows that, whilst 49% of stop searches take place on under 25's, this group accounts for 69% of searches for offensive weapons and 75% of firearms searches. Following the deaths nationally of a number of young people, who have been the victims of gun and knife crime, and the recently publicised comments of the Children's Commissioner, this is a very topical issue on which independent advice could prove useful in shaping future police activity in this area.

## **7. CONCLUSION**

A number of issues continue to be highlighted in this report in relation to Stop/Search and Stop/Account activity; in particular, the need for full completion and quality assurance continues to be reinforced during perceptual training in the Bournemouth and Poole Division. This is an important development opportunity in this area as it allows officers, through direct feedback from role players and members of the public, to gain an understanding of how an individual subject to this type of police action feels, as well as examining legislative processes. Officers have raised concerns regarding the bureaucracy involved with the stop/account procedure; this is a concern reflected nationally and forms part of the review being undertaken by Sir Ronnie Flanagan.

Responses from all divisions have reinforced the importance of a fully searchable database to assist with scrutiny. Their feedback has highlighted the difficulties in interrogating data through DORMIS in order to identify incorrect recording as well as being able to effectively monitor activity.

We continue to exceed the requirement of National recording obligations by recording under the 16+1 classifications for both self defined and Officer Perception; the latter is not a mandatory requirement. However, the subsequent conversion of Officer Perception into the Phoenix code classification for the Home Office requires careful management to retain data integrity.

### **Stop/Account**

In relation to Stop/Account activity, the main reason for being stopped is recorded as 'Behaviour in Area', accounting for 41% of overall activity. The record of Stop/Account activity in the Bournemouth and Poole Division represents 57% of overall force activity, which is reflected in their use of Stop/Search, which represents 68% of overall force activity for April and May 2008.

Males continue to account for 82.9% of all Stop/Account activity and data showed that 64% of overall activity related to those of less than 25 years of age. When looking at activity against self defined ethnicity, 92.7% related to White British and 1.5% to Black and Black British.

### **Stop/Search**

In relation to Stop/Search activity, the main reason for being Stop/Searches continues to be recorded as 'Drugs', which accounts for 60% of overall activity. As highlighted above, the record of Stop/Search activity in the Bournemouth and Poole Division represents 60% of activity during April and May, which is reflected in activity captured for Stop/Account (57%).

The Bournemouth and Poole Division operates "Operation Dismantle" and it is acknowledged that this proactive activity is reflected in recorded Stop/Search activity.

In common with Stop/Account data, males continue to account for the majority of all Stop/Search activity (88.5%), and similarly data showed that 49.3% of records related to individuals who are less than 25 years of age.

When looking at activity against self defined ethnicity 88.6% related to White British and 5% related to Black and Black British. This is similarly reflected in Officer Perception data.

Of the total number of recorded Stop/Searches for April and May, 10.8% resulted in an arrest. However, as highlighted in Section 5.6, page 16, it is not currently possible to assess the correlation between the reason code for the Stop/Search and the arrest.

When comparing ethnicity to the arrest rate, the highest percentage was recorded against reason code 'Firearms' for White and White British classification (40%), whereas 'Going Equipped' showed the highest percentage for Black and Minority Ethnic classification (33.3%).

Comparisons continue to be undertaken on the activity at a force level against the resident population from the Census data. It is on this basis that disproportionality is assessed at a National level, and highlights that recorded activity against individuals in all visible ethnic groups continues to be apparently disproportionate, particularly in relation to those individuals who are Black or Black British.

Members will recall from the last report that the current recording system does not allow the force to readily investigate the data in more depth other than through a resource intensive manual process. Members are also aware this is incorporated in the Street Interventions Project work, which has been postponed and is awaiting the appointment a new Project Manager.
